3. Write a C Program to display the Fibonacci series of the given term using recursion.

```
#include <stdio.h>

// Function Prototype
int fibo(int);

int main(void)
{
   int n, i;

   printf("Fibonacci series: Enter a number: ");
   scanf("%d", &n);

   printf("Fibonacci series of %d\n", n);

   // Loop to print each term of the series
   for (i = 0; i < n; i++)
   {
```

```
        printf("%d ", fibo(i));
    }

    printf("\n");

    return 0;
}
    // Recursive function definition

    int fibo(int n)
{
    if (n == 0)
    {
        return 0;
    }
    else if (n == 1)
    {
        return 1;
    }
    else
    {
        // Recursive step: sum of previous two terms
```

```
        return (fibo(n - 1) + fibo(n - 2));
    }
}
```
