

9. Write a C program to add first 7 terms of the following series using $1/!1 + 2/!2 + 3/!3 + \dots$

```
#include<stdio.h>
```

```
int factorial(int);
```

```
int main()
```

```
{
```

```
    int i, n=7;
```

```
    float sum=0.0;
```

```
    for(i=1; i<=7; i++) // Fixed: i<=7 instead of 1<=7
```

```
    {
```

```
        sum = sum + (float)i/factorial(i);
```

```
        printf("%d/%d!+", i, i);
```

```
    }
```

```
    printf("\b\b = %f\n", sum);
```

```
    return 0;
```

```
}
```

```
int factorial(int num)
```

```
{
```

```
    int j, fact=1;
```

```
    for(j=1; j<=num; j++)
```

```
    {
```

```
        fact = fact*j;
```

```
    }
```

```
    return fact;
```

```
}
```
