

5. Write a C Program to find sum and average of three numbers using call by reference method of passing arguments to a function.

```
#include <stdio.h>
```

```
// Function Prototype using pointers for call by reference
```

```
void calculate(int a, int b, int c, int *s, float *avg);
```

```
int main(void)
```

```
{
```

```
    int n1, n2, n3, sum;
```

```
    float average;
```

```
    printf("Enter three numbers: ");
```

```
    scanf("%d %d %d", &n1, &n2, &n3);
```

```
// Function call: passing addresses of sum and average using '&'
```

```
    calculate(n1, n2, n3, &sum, &average);
```

```
printf("\nSum = %d", sum);
printf("\nAverage = %.2f\n", average);

return 0;
}

// Function definition
void calculate(int a, int b, int c, int *s, float *avg)
{
    // Modify the value at the memory address directly
    *s = a + b + c;
    *avg = (float)(*s) / 3;
}
```
